

EXHIBITION CATALOG

Why should you participate at a trade fair?

A trade fair is the ideal place where you can promote your product range and make new business partners. Also, you can launch your new releases in your field of business as well as find out what is your competition up to.

Participating to a trade fair also gives you the opportunity to:

- ✓ directly interact with a potential client or business partner;
- ✓ make yourself noticed by your target market segment;
- ✓ directly launch your new products;
- ✓ strengthen your relationships with existing business partners;
- ✓ obtain a quick feedback

Regardless of how many advantages could the nowadays advanced technology offer us, it will not equal the impact of direct interaction.

Your stand - your image

The success of an event or an exhibition also depends on your exhibition stand.

In order for your exhibition stand to make an impact on the visitors, you must have the following details very clearly defined:

LOCATION

- ✓ What are the dimensions of the area you have available?
- ✓ How high are you allowed to make your exhibition displays?
- ✓ How many open sides / access sides will your have to your exhibition stand?

DESIGN

- ✓ What types of systems do you want (walls, arches, desks, atypical shapes, etc.)?
- ✓ How do you want to position them based on the available space?
- ✓ How illuminated do you want to have your exhibition stand?
- ✓ Are you taking into account other elements such as a support for brochures, etc.?

USE OF THE STAND

- ✓ How often do you use it? Can it be reused? Can it be easily maintained /cleaned?
- ✓ How do you transport it? An ideal stand can be easily transported and requires a small storage space.

BUDGET

- ✓ Do you intent to reuse the systems? Can you print both sides of the textile cover?
- ✓ Take into account systems that allow for individual use as well as in combinations of various dimensions.

Reasons to choose a FormTex exhibition stand

Portable

Small Cost

Rapid and easy assembling

Variety of shapes

Easy and compact

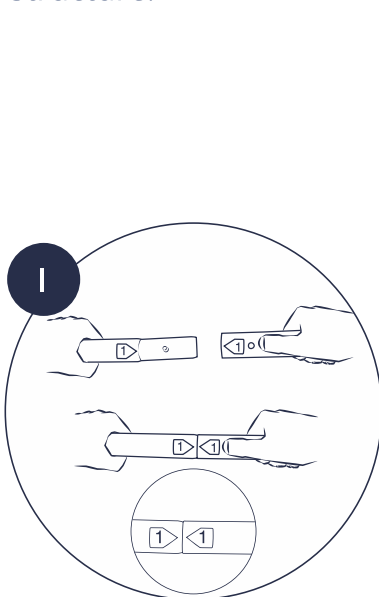

Reuse

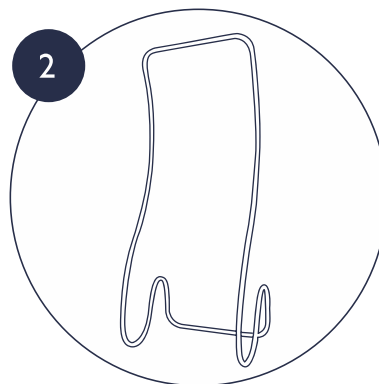

Assembling the Click structures

The FormTex Click portable exhibition systems represent an innovative mode of presenting a brand or a message. Each system consists of a modular aluminum structure, tightly covered with an elastic fabric, printable with high quality images and text.

Assembling the structures is very easy - the internal aluminum structure requires only connecting the edges of the segments, following the numbering visible on them (like a children's puzzle). Once the structure assembled, the textile is pulled over it, the last step being to close the zipper on the textile, thus ensuring that it stays tight on the structure.

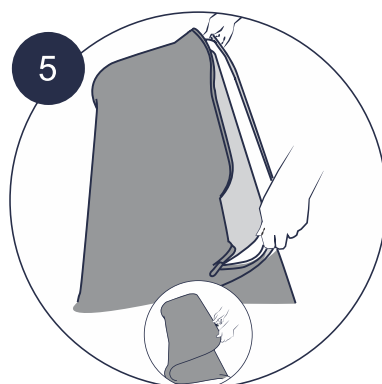

Assemble the interior aluminum structure by joining the segments according to their numbering.

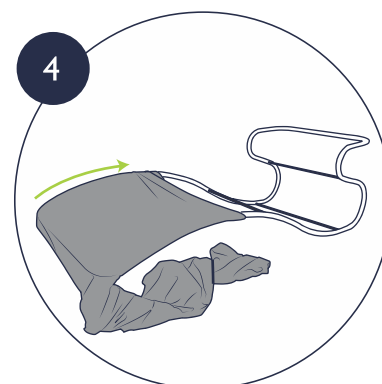

Connect all pieces until you've created the complete shape of the structure.

Make sure your hands are clean. It is recommended the use of the gloves that are in the package.

Close the zipper at the other end of the textile.
Your FormTex Click structure is ready!

Pull the textile onto the aluminum frame, making sure it is tight.

Assembling the LightBox structures

The portable LED LighBox is made of anodized aluminum modular frame with a width of 12 cm. Its 2 fabric printed sides are uniformly illuminated from interior over their entire area with high power LED spotlights.

The set-up is done without tools or previous technical knowledge, by simply following a few easy steps in the instructions manual. The magnetized connectors of the cables make their connection to the sockets very easy.

The set-up is done without tools or previous technical knowledge, by simply following a few easy steps.

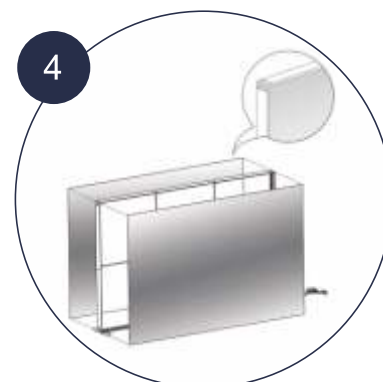

The magnetized connectors of the cables make their connection to the sockets very easy.

Tool-less down to its feet, is designed to help heighten your display experience

Guaranteed impact - bright and intense colors through light projected from interior

Now, it's time to install the graphics. Tilt the frame over for setup. Begin by inserting the silicone edge inside the frame, starting with the corners, then progressing to the middle edges
